

Guilherme Rodovalho

Full Stack Software Architect | Frontend & Performance Specialist | AI Engineer

São Paulo, SP - Brazil | +55 (34) 99161-9467 | rodovalhogdeveloper@gmail.com | linkedin.com/in/guilherme-rodovalho | github.com/rodovalhog

PROFESSIONAL SUMMARY

Full Stack Software Architect and Front-end Specialist with over 7 years of experience building responsive, scalable, high-performance applications, actively defining technical standards and steering architectural decisions. Specialist in web performance and application evolution, modernizing legacy systems to elevate user experience, reduce infrastructure costs, and engineer sustainable, highly efficient systems. Deep experience with React, Next.js, and Node.js, alongside hands-on application audits to isolate and eliminate CPU, memory, network, and rendering bottlenecks. Leverages AI as an engineering productivity multiplier-combining technology with deep domain expertise to research, analyze, and execute faster without outsourcing technical judgment or compromising quality. Dedicated to transforming complex technical challenges into simple, scalable solutions with tangible product and business impact.

CORE TECHNICAL COMPETENCIES

- * Frontend Development & React / Next.js: React, Next.js, TypeScript, JavaScript, HTML5, CSS3, Webpack, Module Federation
- * Frontend Architecture & Systems Design: Frontend Architecture, Micro Frontends, Modular Architecture, Component Architecture, Clean Code, Design Patterns, SOLID
- * Web Performance & Core Web Vitals: Core Web Vitals, LCP, CLS, INP, TTFB, SSR, SSG, Code Splitting, Dynamic Imports, Lazy Loading, Bundle Optimization, CDN, Caching
- * Technical SEO & Rendering Architecture: Technical SEO, Structured Data, Semantic HTML, URL Normalization, Canonical URLs, Redirects, Crawlability, Indexation, GA4
- * AI Engineering, Agentic AI & WebMCP: Agentic AI, LLMs, Generative AI, Compound AI, MCP, Context Engineering, AI Workflows, AI-assisted Software Engineering
- * Quality, Testing & CI/CD: Jest, React Testing Library, Enzyme, TDD, SonarCloud, ESLint, CI/CD, GitHub Actions, Observability, Sentry
- * Backend & Integration: Node.js, GraphQL, REST APIs, MongoDB, PostgreSQL, drizzle-orm

PROFESSIONAL EXPERIENCE

Senior Frontend Software Engineer / Technical Lead

2024-10 - Present

Grupo Casas Bahia (GCB) - São Paulo, Brazil · Remote

Led the refactoring of the search and filtering architecture for an e-commerce platform serving 19M+ users and 1M+ daily active shoppers, addressing inconsistent filters, canonical URLs, indexing issues, and frontend rendering behavior.

- * Led the refactoring of the search and filtering architecture for an e-commerce platform serving 19M+ users, addressing inconsistent filters, canonical URLs, indexing issues, and frontend rendering behavior to create a more stable and predictable experience.
- * Redesigned the technical SEO and rendering strategy for category, department, and collection pages using SSR/SSG, structured data, semantic HTML, URL normalization, and canonicalization, contributing to organic growth from 12 to 92.6K clicks in 3 months and 23M+ impressions, based on Google Search Console data.
- * Investigated and optimized frontend performance across the critical rendering path, analyzing document loading, TTFB, LCP, JavaScript execution, resource loading, rendering behavior, and network requests to identify bottlenecks affecting the initial page experience.
- * Improved frontend delivery through code splitting, dynamic imports, bundle optimization, lazy loading, and resource prioritization, reducing unnecessary JavaScript execution and improving the loading experience of critical page content.
- * Investigated SSR performance, CDN/Akamai caching, cache invalidation, and server-side data fetching, identifying scenarios where caching behavior could affect page consistency and performance.
- * Analyzed Core Web Vitals, including LCP, CLS, and INP, connecting metric degradation to concrete frontend causes such as large JavaScript bundles, render-blocking resources, image loading, hydration, and client-side execution.
- * Restructured frontend data flows and application patterns, addressing edge cases and mutability issues that caused inconsistent behavior and recurring problems across the search experience.
- * Led technical decisions and architecture standards for the initiative, guiding implementation toward greater scalability, maintainability, performance, and consistency.

Skills / Tech: React, Next.js, TypeScript, JavaScript, HTML5, CSS3, SSR/SSG, SEO Técnico, Core Web Vitals, Akamai CDN, Node.js, Jest, GA4

Senior Frontend Software Engineer

2023-10 - 2024-10

Hotmart - Brazil · Remote

Designed and implemented a modular dashboard and onboarding architecture using React, TypeScript, Webpack, and Module Federation, enabling independent modules and safer deployments for 35M+ global users.

- * Designed and implemented a modular dashboard architecture using React, TypeScript, Webpack, and Module Federation, enabling independent modules and safer deployments while supporting continuous product evolution.
- * Implemented frontend observability, including performance metrics, logging, and tracing, improving release quality and reducing Mean Time to Recovery (MTTR).
- * Established practices for monitoring frontend behavior and identifying performance and reliability issues across production environments.
- * Applied accessibility (a11y) practices and collaborated with Product and UX teams to deliver consistent, data-driven experiences in an A/B testing environment focused on user onboarding and conversion.

Skills / Tech: React, TypeScript, Webpack, Module Federation, Node.js, Sentry, A/B Testing, a11y, Core Web Vitals, GA4

Senior Frontend Software Engineer

2021-03 - 2023-10

Inவில்리아 - Brazil · Remote

Led the implementation of a micro frontend architecture with Module Federation and Design System, enabling teams to develop and deploy features independently with automated CI/CD and clean code standards.

- * Led the implementation of a micro frontend architecture using React and TypeScript, enabling teams to develop and deploy features independently with safer and faster release cycles.
- * Designed shared state and integration patterns across applications, ensuring consistent communication while maintaining module isolation.
- * Established frontend standards for component architecture, testing, integration patterns, performance, and clean code, while mentoring

developers and accelerating team onboarding.

- * Implemented automated testing and CI/CD practices using Jest, React Testing Library, SonarCloud, and GitHub Actions, along with backend development using Node.js and PostgreSQL.

Skills / Tech: React, TypeScript, Micro Frontends, Module Federation, Node.js, PostgreSQL, Jest, React Testing Library, SonarCloud, GitHub Actions

Senior Frontend Software Engineer / Full Stack Developer

2020-05 - 2021-03

NTT DATA / everis (Banco Bradesco) - Uberlândia / São Paulo, Brazil

Developed React applications integrated through WebView for Banco Bradesco's cards app, solving complex communication and behavioral differences between iOS, Android, and web environments.

- * Developed React applications integrated through WebView, solving complex communication and behavioral differences between iOS, Android, and web environments.
- * Implemented authentication, SSO, navigation, and platform-specific flows while collaborating with mobile and backend teams to improve cross-platform stability.
- * Engineered advanced JavaScript performance optimizations to ensure fluid UX and low-latency interaction in hybrid mobile environments.
- * Developed backend capabilities using TypeScript and Node.js to power card services and transactional integration.

Skills / Tech: React, JavaScript, TypeScript, Node.js, WebView, Mobile Hybrid, SSO, Performance Optimization

Web Developer / Full Stack Developer

2019-04 - 2020-11

eNe Solutions (Algar Telecom) - Brazil - Remote

Supported and evolved Algar Telecom enterprise systems, delivering improvements and fixes across web applications and APIs with a focus on stability, maintainability, and product evolution.

- * Supported and evolved Algar Telecom systems, delivering improvements and fixes across web applications and APIs with a focus on stability, maintainability, and product evolution.
- * Worked with React, Gatsby, MobX, GraphQL, Node.js, MongoDB, and TypeScript across enterprise portals and client-facing telecom systems.

Skills / Tech: React, Gatsby, MobX, GraphQL, Node.js, MongoDB, TypeScript

EDUCATION

Faculdade das Américas (FAM) - Bachelor's Degree in Computer Science

2019 - 2026

Computer Science

SPECIALIZATIONS & CERTIFICATIONS

- * Desenvolvimento de Aplicação Serverless na AWS - Amazon Web Services (AWS) (2023)
- * Clean Code e Clean Architecture - Especialização em Arquitetura de Software (2023)
- * Arquitetura AWS - Cloud Treinamentos - Cloud Treinamentos (2023)
- * JS Advanced - EW Academy - EW Academy (2022)
- * Devops Pro - Devops Pro (2023)

LANGUAGES

- * Portuguese: Native
- * English: C1 Fluent
